

DIGITAL PRINTING AND CONVERTING TIPS

SPECIAL INSTRUCTIONS FOR PRINTING DIGITAL DIE CUTS THROUGH A LASER COPIER OR INK JET PRINTER

Showcase™ die cut labels are specifically designed to run great in your digital equipment. Because there is no adhesive on the outer 1/16" edge of the sheet you do not have to worry about adhesive contamination.

Formatting

- Follow software guidelines. Die Cut templates are available on the Showcase web site – [click here](#)
- Showcase die cut labels are also compatible with Avery brand label templates

Fanning

- Select the desired number of label sheets and gently fan the edges to reduce static electricity. If curl is present, manually bend and flatten before loading

Loading and Printing

- Consult the owner's manual to determine the proper placement of the labels in the feed tray: GSM=159
- Place labels directly on top of the paper stack in the tray
- Do not exceed the recommended number of sheets

Storage of Unused Labels

- Place any unused sheets from paper tray into the protective plastic bag and store in a cool dry environment

Cautions

- Do not run label stock through the printer twice
- Showcase labels are not designed for guillotine cutting
